

HYDROSTOP

0% ASH CONTENT FOR HIGHER FLEXIBILITY

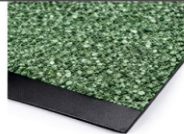

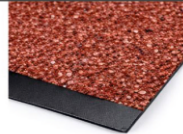

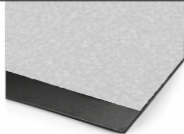

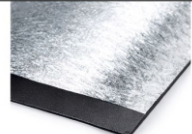

APP Polymer Modified Bitumen Membranes designed for long-lasting Protection.

TIKIDAN
Building together

 High-temperature resistant	 High mechanical strength	 Great Flexibility	 Viscoelastic property
 Superior watertightness	 Excellent surface bonding	 Easy to repair	 High product durability

Hydrostop series is a Full life cycle performance, waterproofing solution for the building segment of all structures, especially roofing and podium sections. This product utilizing Hybrid technology of polymer science that involves the modification of bituminous substances with Thermoplastic - APP polymers. It is designed to act as barrier for water ingress into the concrete structures.

RANGE OF HYDROSTOP

Product	Hydrostop PY/FG	Hydrostop PY/FG	Hydrostop PY/FG
Finish Type	Plain	Mineral	Aluminium
		  	
		Green Red Grey	
Thicknesses ranging from 2mm to 5mm			

TECHNICAL PROPERTIES

- ✓ 150°C Softening Point
- ✓ 0°C to -5°C Flexibility at Low Temperature
- ✓ >120°C Resistance to Flow at High Temperature

PRODUCT HIGHLIGHTS

- High watertightness and impermeability ensure dependable waterproofing throughout the building's life.
- Effectively resists hydrostatic water pressure, preventing water seepage caused by standing or trapped water.
- Suitable for application on all common construction substrates.
- Accommodates concrete movement and minor structural variations without loss of performance.

PRODUCT ADVANTAGES

- High-performance, complete waterproofing solution for concrete building structures
- Durable, long-lasting system that reduces lifecycle, repair, and maintenance costs
- Creates a continuous protective barrier, isolating structures from surroundings and preventing water penetration and moisture damage

AREAS OF APPLICATION

TIKI TAR DANOSA (INDIA) PRIVATE LIMITED

Tel.: +91 22 4126 6666 | E: info@tikidan.in
